

CLAIMS

What is claimed is:

1 1. A method for faxing a document, comprising the steps of:
2 receiving a fax request from a user browser;
3 uploading content to the user browser;
4 receiving a fax job from the user browser; and
5 transmitting a facsimile to a recipient device.

1 2. The method of claim 1, wherein the step of uploading content to the
2 user browser comprises uploading logic configured to generate at least one control
3 screen for display within the browser.

1 3. The method of claim 1, wherein the step of uploading content to the
2 user browser comprises uploading at least one application that is configured to
3 perform a designated task on a computing device on which the browser runs.

1 4. The method of claim 3, wherein the at least one application is
2 configured to determine the contents of a hard disk of the computing device.

1 5. The method of claim 3, wherein the at least one application is
2 configured to retrieve a selected file, translate it, and transmit the translated file back a
3 faxing device.

1 6. The method of claim 1, further comprising the step of receiving
2 information transmitted from the user browser.

1 7. The method of claim 1, wherein the step of receiving information
2 comprises receiving a file name and location.

1 8. The method of claim 7, wherein the step of receiving information
2 further comprises receiving a document type.

1 9. The method of claim 1, further comprising uploading a confirmation
2 notice to the user browser once a facsimile has been successfully transmitted.

1 10. A system for faxing a document, comprising:
2 means for receiving a fax request from a user browser;
3 means for uploading content to the user browser;
4 means for receiving a fax job from the user browser; and
5 means for transmitting a facsimile to a recipient device.

1 11. The system of claim 10, wherein the means for uploading content to
2 the user browser comprise means for uploading logic configured to generate at least
3 one control screen for display within the browser.

1 12. The system of claim 10, wherein the means for uploading content to
2 the user browser comprises means for uploading at least one application that is
3 configured to perform a designated task on a computing device on which the browser
4 runs.

1 13. A system for faxing a document stored on a computer readable
2 medium, comprising:

3 logic configured to receive a fax request from a user browser;
4 logic configured to upload content to the user browser;
5 logic configured to receive a fax job from the user browser; and
6 logic configured to transmit a facsimile to a recipient device.

1 14. The system of claim 13, wherein the logic configured to upload content
2 to the user browser comprise logic configured to upload logic configured to generate
3 at least one control screen for display within the browser.

1 15. The system of claim 13, wherein the logic configured to upload content
2 to the user browser comprises logic configured to upload at least one application that
3 is configured to perform a designated task on a computing device on which the
4 browser runs.

1 16. A faxing device, comprising:
2 a processing device;
3 faxing hardware; and
4 memory comprising a fax control module and an embedded server, the fax
5 control module including logic for generating at least one control screen that can be
6 uploaded to a user browser and at least one application that can also be uploaded to
7 the user browser, the at least one application further being configured to perform a
8 designated task on a computing device on which the user browser runs.

1 17. The device of claim 16, wherein the at least one application is
2 configured to determine the contents of a hard disk of the computing device.

1 18. The device of claim 16, wherein the at least one application is
2 configured to retrieve a selected file, translate it, and transmit the translated file back
3 to the faxing device.

1 19. The device of claim 16, wherein the at least one application comprises
2 a Java applet.
